

## Dual-Cure 9102 Light/Moisture-Cure Clear Encapsulant

**APPLICATIONS**

- Chip on Board
- Chip on Flex
- Chip on Glass
- Wire Bonding

**FEATURES & BENEFITS**

- UV/Visible Light Cure
- Secondary Moisture Cure
- Flexible Encapsulant
- Shadowed Area Performance
- Moisture and Thermal Resistance

**SUBSTRATES**

- FR4
- Kapton
- Glass

Dymax Dual-Cure 9102 is an improved, resilient, chip-encapsulant material designed with a UV/Visible light and secondary ambient moisture-cure system, making it ideal for encapsulation applications where shadowed areas are present. Dymax 9102 is specially formulated to cure in shadowed areas over time with ambient moisture. Dymax Dual-Cure materials contain no nonreactive solvents and cure upon exposure to light and moisture. Their ability to UV cure tack free in seconds enables faster processing, greater output, and lower processing costs. When cured with Dymax light-curing spot lamps, focused-beam lamps, or flood lamps, supplemented by a secondary moisture cure, they deliver high performance for encapsulation requirements. Dymax lamps offer the optimum balance of UV and visible light for the fastest, deepest cures. This product is in full compliance with the RoHS Directives 2002/95/EC and 2003/11/EC.

UNCURED PROPERTIES *		
Property	Value	Test Method
Solvent Content	No Nonreactive Solvents	N/A
Chemical Class	Acrylated Urethane	N/A
Appearance	Translucent Light Straw Liquid	N/A
Soluble in	Organic Solvents	N/A
Density, g/ml	1.09	ASTM D1875
Viscosity, cP (20 rpm)	17,000 (nominal)	DSTM 502 <sup>‡</sup>

CURED MECHANICAL PROPERTIES* (after UV cure + 10 days @ 25° C/75% RH)†		
Property	Value	Test Method
Durometer Hardness	D30-D50	ASTM D2240
Tensile at Break, MPa [psi]	4.8 [703]	ASTM D638
Elongation at Break, %	34	ASTM D638
Modulus of Elasticity, MPa [psi]	18.4 [2,670]	ASTM D638
Glass Transition T <sub>g</sub> , °C	41	DSTM 256 <sup>‡</sup>
CTE <sub>α1</sub> , μm/m/°C	96	DSTM 610 <sup>‡</sup>
CTE <sub>α2</sub> , μm/m/°C	156	DSTM 610 <sup>‡</sup>

OTHER CURED PROPERTIES* ‡		
Property	Value	Test Method
Refractive Index (20°C)	1.50	ASTM D542
Boiling Water Absorption, % (2 h)	0.4	ASTM D570
Linear Shrinkage, %	2.0	ASTM D2566

ELECTRICAL PROPERTIES *		
Property	Value	Test Method
Dielectric Constant (1 MHz)	3.05	ASTM D150
Dissipation Factor (1 MHz)	0.06	ASTM D150
Dielectric Breakdown Voltage, kV/mm [V/mil]	25.87 [657]	ASTM D149
Volume Resistivity, ohm-cm	4.89E+13	ASTM D257
Surface Resistivity, ohm	3.83E+12	ASTM D257

**CURING GUIDELINES**

**Light Cure**

Fixture time is defined as the time to develop a shear strength of 0.1 N/mm<sup>2</sup> [10 psi] between glass slides. Actual cure time typically is 3 to 5 times fixture time.

Dymax Curing System (Intensity)	Fixture Time or Belt Speed <sup>A</sup>
5000-EC (200 mW/cm <sup>2</sup> ) <sup>B</sup>	2 s
BlueWave <sup>®</sup> 200 (10 W/cm <sup>2</sup> ) <sup>B</sup>	0.4 s

**A** Curing through light-blocking substrates may require longer cure times if they obstruct wavelengths used for light curing (320-400 nm for UV light curing, 320-450 nm for UV/Visible light curing). These fixture times/belt speeds are typical for curing thin films through 100% light-transmitting substrates.

**B** Intensity was measured over the UVA range (320-395 nm) using a Dymax ACCU-CAL™ 50 Radiometer.

Full cure is best determined empirically by curing at different times and intensities, and measuring the corresponding change in cured properties such as tackiness, adhesion, hardness, etc. Full cure is defined as the point at which more light exposure no longer improves cured properties. Higher intensities or longer cures (up to 5x) generally will not degrade Dymax light-curable materials.

Dymax recommends that customers employ a safety factor by curing longer and/or at higher intensities than required for full cure. Although Dymax Application Engineering can provide technical support and assist with process development, each customer ultimately must determine and qualify the appropriate curing parameters required for their unique application.

**Moisture Cure**

Moisture is used as a secondary cure mechanism for shadowed areas that cannot be cured with light. While moisture cure time is typically 2-3 days at 25°C [77°F], 50% RH, actual moisture cure time is application specific and may vary. Cure time depends on humidity level, amount of coating in shadowed areas, and proximity of shadowed coating to humidity. Coating entrapped under large components may have a prolonged cure time.

**DEPTH OF CURE**

The graphs below show the increase in depth of cure as a function of exposure time with two different lamps at different intensities. A 9.5 mm [0.37 in] diameter specimen was cured in a polypropylene mold and cooled to room temperature. It was then released from the mold and the cure depth was measured.

### OPTIMIZING PERFORMANCE AND HANDLING

1. This product cures with exposure to UV/Visible light and ambient moisture. Exposure to light and ambient moisture should be kept to a minimum before curing. Dispensing components including needles and fluid lines should be 100% light blocking, not just UV blocking.
2. All surfaces in contact with the material should be clean and free from flux residue, grease, mold release, or other contaminants prior to dispensing the material.
3. Cure speed is dependent upon many variables, including lamp intensity, distance from the light source, required depth of cure, thickness, and percent light transmission of components between the material and light source.
4. Oxygen in the atmosphere may inhibit surface cure. Surfaces exposed to air may require high-intensity (>100 mW/cm<sup>2</sup>) UV light to produce a dry surface cure. Flooding the curing area with an inert gas, such as nitrogen, can also reduce the effects of oxygen inhibition.
5. Parts should be allowed to cool after cure before testing and subjecting to any loads or electrical testing.
6. In rare cases, stress cracking may occur in assembled parts. Three options may be explored to eliminate this problem. One option is to heat anneal the parts to remove molded-in stresses. A second option is to open any gap between mating parts to reduce stress caused by an interference fit. The third option is to minimize the amount of time the liquid material remains in contact with the substrate(s) prior to curing.
7. Light curing generally produces some heat. If necessary, cooling fans can be placed in the curing area to reduce the heating effect on components.
8. At the point of light curing, an air exhaust system is recommended to dissipate any heat and vapors formed during the curing process.
9. Do not open the syringe before contents reach 25°C [77°F]. Typical warm-up time for a syringe is two hours. Remove any moisture collected on the warmed-up syringe before opening.
10. Light cure is recommended prior to moisture cure. Full cure develops after light and moisture cure.

### DISPENSING THE MATERIAL

This material may be dispensed with a variety of manual and automatic applicators or other equipment as required. Pressurized air must be free of moisture to prevent premature curing in dispensing equipment. Pressurizing with a dry inert gas, such as nitrogen, is recommended. Questions relating to dispensing and curing systems for specific applications should be referred to Dymax Application Engineering.

### CLEAN UP

Uncured material may be removed from dispensing components and parts with non-alcoholic solvents such as Butyl Acetate and acetone. Cured material will be impervious to many solvents and difficult to remove. Clean up of cured material may require mechanical methods of removal.

### PERFORMANCE AFTER TEMPERATURE EXPOSURE

Dymax light-curable materials typically have a lower thermal limit of -54°C [-65°F] and an upper limit of 150°C [300°F]. Many Dymax products can withstand temperatures outside of this range for short periods of time, including typical wave solder processes and reflow profiles. Please contact Dymax Application Engineering for assistance.

### STORAGE AND SHELF LIFE

Store the material in a cool, dark, and dry place when not in use. Do not expose to light. This product may polymerize upon prolonged exposure to ambient and artificial light, as well as atmospheric moisture. Keep covered when not in use. This material has a minimum six-month shelf life from date of shipment, unless otherwise specified, when stored between 1°C [34°F] and 5°C [41°F] in the original, unopened container.

### GENERAL INFORMATION

This product is intended for industrial use only. Keep out of the reach of children. Avoid breathing vapors. Avoid contact with skin, eyes, and clothing. Wear impervious gloves. Repeated or continuous skin contact with uncured material may cause irritation. Remove material from skin with soap and water. Never use organic solvents to remove material from skin and eyes. For more information on the safe handling of this material, please refer to the Material Safety Data Sheet before use.
