

GV Series Automated Dispensing Systems

A complete gantry automation system with vision for precise fluid application

GV Series provides market-leading dimensional positioning accuracy and deposit placement repeatability.
**XY calibration delivers best-in-class repeatability*

The GV Series automated dispensing system has an unlimited workpiece payload, providing a full range of application choices.

Nordson EFD's vision-guided GV Series automated dispensing systems deliver easy automation for precise fluid applications.

Specialized DispenseMotion™ software and an integrated CCD smart vision camera or a simple pencil camera make EFD automated systems quick to set up and easy to program. True three-dimensional motion control allows easy programming of dots, lines, circles, arcs, and compound arcs.

Working envelopes range from 400 mm to 800 mm, making them an ideal solution for precise fluid dispensing onto substrates requiring large work envelopes while not sacrificing repeatability.

The GV Series can work as a standalone system or as a key part of an automated solution and is easily integrated into rotary tables and conveyor-fed assembly lines.
